PROFESSIONAL SUMMARY

Applied AI engineer and manager specializing in productionalizing AI systems. I've built AI products from the ground up that secured over \$1M in funding, won competitive enterprise deals, and managed teams in revenue-generating deployments in regulated environments. I operate at the intersection of engineering, product, and go-to-market, turning AI capabilities into systems customers trust.

CORE COMPETENCIES

- AI Product Integration
- Go-to-Market Alignment
- AI Observability & Evaluation
- Agentic Workflow Orchestration
- Multimodal AI Systems
- R&D Management
- Data & ML Infrastructure
- Agile Team Management
- Stakeholder Communication

SKILLS

- AI/LLM:** PyTorch, Huggingface, RAG, CAG, LoRA, CUDA, LangChain, LangGraph, MCP, OpenAI/Anthropic API
- Data/Infra:** Python, Pandas, Polars, SQL, Apache Spark, Docker, Kubernetes, Helm, Firebase, AWS
- Full Stack:** FastAPI, Vue.js, Git, Linux, Native Android, SQLite, Redis, AWS Amplify, MongoDB

WORK EXPERIENCE

Founding AI Engineering Lead · Eyelevel.ai · Austin, TX · January 2025 – Current

- Leading development of [FraudX](#), an AI-powered fraud investigation platform, from the ground up, resulting in 8,000 claims and over \$500k revenue at a cost of 12 months of development and \$150k in contracting fees.
- Building LLM observability and evaluation systems (RAG + LLM-powered span-level attribution + source linking), enabling customer-facing validation and reducing evaluation time by 20x.
- Designing and deploying production ML systems for entity canonicalization (using a custom GATv2-style graph model), drastically speeding up claim processing by over 100x in some cases.
- Architecting agentic AI pipelines (entity recognition, relationship extraction, multi-step reasoning) and overseeing the development of a production-grade product around those pipelines.

Director of AI Engagement · Eyelevel.ai · Austin, TX · October 2023 – Current

- [Producing technical content](#) that served as the chief source of inbound traffic, attracting organizations including Apple, Samsung, AWS, and Intel. Ultimately, the material I created attracted the acquirer of the company.
- Developing open-source tooling, such as both [Python](#) libraries and [Kubernetes](#) applications, accelerating the adoption of our platform with key partners such as Red Hat.
- [Creating documentation](#) and examples around the core product, functioning as the main knowledge base of the product. Because this was done in early stages, this required me to conceptually define the product itself.

AI Writer/Teacher · Intuitively and Exhaustively Explained · Austin, TX · June 2023 – Current

- Followed by 20k+ engineers, professors, software developers, investors, and students from around the globe, many of which I maintain close professional relationships with.
- Covering a variety of topics, including [NLP](#), [CV](#), [agentic design](#), [retrieval-augmented generation](#), and [more](#).

Co-Founder · OK2StandUP · Pittsburgh, PA · February 2021 – February 2024

- Implemented the backend for the POC application (model, deployment, business logic, MLOps, datasets, etc.), which was used to secure letters of intent to purchase and allowed for over \$750k in funding.
- Utilized various technologies across the stack to serve that POC at scale, allowing us to [collect user data](#) and establish a working relationship with skilled nursing facilities around the greater Pittsburgh area.
- Led teams across numerous revisions of the original POC, resulting in a refined and production-ready version that could support numerous developers releasing updates in a stable and compliant release process.

Lead Data Scientist · OK2StandUP · Pittsburgh, PA · April 2019 – February 2024

- Built time-series models for activity classification, enabling pilots with major skilled nursing facilities.
- Refined those models to [over 95%](#) accuracy, allowing OK2StandUP to achieve the efficacy necessary to fund at \$1M.
- Developed data infrastructure for collection, annotation, and versioning of ground truth datasets, establishing a moat.

EDUCATION

University of Pittsburgh | Johnstown, PA

Graduated: 2020

Bachelor of Science (B.S.) in Mechanical Engineering / Minors in Computer Science & Mathematics
